European Parliament votes in favour of a LULUCF regulation better fit for purpose

The European organisations representing the forestry and agriculture sectors as well as woodworking and paper industries see the reaction of the European Parliament within the Land Use, Land Use Change and Forestry (LULUCF) regulation as a positive step. The Parliament voted today in favour of more dynamic forest reference levels to account for emissions and removals from sustainably managed forests.

EUSTAFOR, CEPF, Copa and Cogeca, CEPI and CEI-Bois recognise that the Parliament calls for flexible and forward-looking rules when establishing forest reference levels. However, further work is needed to ensure that the full potential of sustainably managed forests and wood-based products in mitigating climate change is fully accounted for as the final formulation of the regulation will be agreed in trilogues.

It is crucial for the European Union to keep promoting the use of domestic forest resources and the development of the entire forest-based value chain.

“The voting result encourages Member States to continue using their growing forest resources sustainably in order to decarbonise the European economy. However, there still remains quite some room to further improve the LULUCF regulation,” says **Piotr Borkowski**, Executive Director of EUSTAFOR. “Actively and sustainably managed European forests are essential to allow the European Union to play a leading role in combining environmental integrity with societal needs and economic development.”

“This is a step in the right direction for a policy that puts the EU on track to meet the Paris Agreement goals. It enables continued investments into the forest sector and sustainable forest management – the best long-term strategy to maintain the carbon sink and ensure multiple benefits from our forests,” says **Emma Berglund**, Secretary General of CEPF.

Copa and Cogeca Secretary-General **Pekka Pesonen** said, “Today’s vote upheld sustainable forest management practices and recognised the billions of investments made in rural areas. Sustainable harvest practices go hand in hand with the multifunctional role of forests. This brings excellent results for the climate, society and the economy. It makes no sense to outsource the provision of sustainable raw materials for our bioeconomy in non-EU countries. Diseases and forest fires are equally disastrous and Member States should be given the opportunity to manage the forests in a way that also addresses these important challenges. Future discussions with the Council must ensure that every country, no matter how big or small, has the opportunity to continue managing their forests in a transparent and science-

based manner with a long-term strategy, without fear of being penalized or infringing on the rights of private owners.”

“This vote has put investment in Europe’s forests back at the forefront of the LULUCF regulation. This is a win-win for Europe’s climate strategy and the 1.8 million people working in the forest-based bioeconomy chain,” says **Sylvain Lhôte**, Director General at CEPI.
