

## EcoReFibre M18 General Assembly: promising results towards industrial trials

---

*Brussels, 16 November 2023*

On 7 and 8 November, the [EcoReFibre](#) consortium met in Paris for the M18 General Assembly.

Hosted by [FCBA technological institute](#), the meetings dealt with the project's main achievements until now, work in progress and next steps.

Insightful presentations on the state of play of each of the work packages and demos as well as technical discussions towards joint efforts related to industrial trials contributing to the project deliverables were at the core of the discussions. Interactive workshops dedicated to demonstration and dissemination/exploitation missions were on the agenda to foster further sharing of knowledge, dialogues and collaboration between partners.

The first test results of lab trials are so positive that partners discussed ways to undertake the industrial trials to succeed in industrialisation of the technologies.

The consortium experts also agreed to expand the work to develop and share best practices and recommendations for improving and developing new collection schemes for clean wood and fibreboard waste at industrial scale for the industry to enable increasing recycling rates.
